

Triangle Point
to the tune of "Pretty in Pink"

Lyrics by Steven Meece
Music by the Psychedelic Furs [Ashton / Butler / Butler / Ely / Kilburn / Morris]
Sung by Sara Da Silva, Steven Meece and Anna Smol

Triangles they have
always three corners
You can measure each one of the three
The corners you see
They have a degree...
The numbers will tell you
its name

Equilateral triangles
Each corner is sixty
This is it
That's the end of the calc.
One eighty degrees all
triangles are that and
sixty's one eighty cut
three equal ways.

Triangle point
Measure it
Triangle point
Measure it

When all of the points
all go different ways
and the angles
just don't match up
We call that **scalene**
and isn't it strange to see.
The one who insists
in matching two corners
that triangle
it has two the same.
A typical triangle
Like a wedge
Or a pizza
Or a pie
Isosceles' the name.

Triangle point
Measure it
Triangle point
Measure it

Triangles talk to you softly sometimes

It says I'm 90 degrees and I'm **right**.

If you don't have anything

As wide as that

Well

Nothing past 89

It's cute.

We say it's **acute**.

But **obtuse** is waiting outside --

It looks like a ramp

It's wide and it's long

90 plus degrees.

Triangle point

Measure it

Triangle point

Measure it
